Keywords : pollution; waste; circular economy ; fluid mechanics; chemistry; materials;

Programme

Learning outcomes

- Dare: actively contribute to the smooth running of the working session in groups by a good balance between active listening and participation; take care of your language, adapt your communication to others; express yourself assertively: affirms your point of view while respecting differences of opinion.
- Knowing oneself, building oneself: analyze a situation based on the concepts of personal resources (strengths, values, motivations, etc.), emotional intelligence and self-esteem to be aware of your preferred modes of functioning and the diversity of behavioural profiles.

Independent study

Objectifs :

Méthodes :

Investigate as a team using field data to determine which pollutants are responsible for a public health problem. Mobilize notions of the "tronc commun" (e.g. FLE, MATH, INFO...). Each team is composed of students with
